

## **Australian Digital Terrestrial Television Broadcasting Service Information Register**

**Issue 5      Date : 17 February 2013**

### **Background**

Technical parameters of Australian Digital Terrestrial Television Broadcasts (DTTB) are in accordance with AS 4599.1—2011 *Australian Standard® Digital television—Terrestrial broadcasting Part 1: Characteristics of digital*.

AS 4599.1-2011 references two operational practices published by FreeTV Australia for the allocation of service information values, which are critical to the identification and discovery of services in DVB transport streams.

The latest version of the two operational practices are :

#### **1. Free TV Australia Operational Practice OP-40 *Allocation of DVB Service Information Codes for Australia* Issue 3 Dated December 2012**

This operational practice specifies the method and values for assignment of DVB network, transport and service identifiers carried in the program specific information / service information (PSI/SI) of free-to-air digital terrestrial and satellite television broadcasts in Australia, including :

- original\_network\_id (ONID); where there is one ONID per transport stream and the actual value used may correspond to the network\_id
- network\_id (NID); where there is one NID per transport stream
- transport\_stream\_id (TSID); where there is one TSID per transport stream
- service\_id (SID); where there may be multiple SIDs per transport stream and each SID will have a corresponding logical channel number (LCN).

#### **2. Free TV Australia Operational Practice OP 41 *Logical Channel Descriptor and Allocation of Logical Channel Numbers* Issue 7 Dated February 2013**

This operational practice specifies the operational parameters for use of the logical\_channel\_descriptor for Australian Free-to-air Digital Terrestrial Television transmissions and assigns the allocation of Logical Channel Numbers (LCNs) to be used to identify television and radio services carried on free-to-air DVB transmissions.

## Legend

The following tables list service information values in use by Australian broadcasters for terrestrial television transmissions, which have been allocated to broadcasters according to FreeTV's Operational Practices. The allocations are listed by commercial television market areas, which often form a sub area to a broadcaster licence area. It should be noted that values may be identical in different market areas, this indicates the same transmission serves both areas. In the case of national broadcasters, a group of values may cover many market areas as the one transport stream is fed to a multitude of areas. These listing by market areas are in hexadecimal values. Table 2 provides a list of all service information in both hexadecimal and the corresponding decimal values.

For each transport stream, there will only be one ONID, NID and TSID value, but there may be many services. These form a "block" in the tables which may be readily identified as a stream description.

Where a block in a market area is shaded, this indicates that the broadcaster does not hold a licence to transmit in that area.

Where a block in a market area is unshaded and contains no values, this indicates that the broadcaster holds a licence to broadcast in that area, but has not yet commenced transmissions in that area.

Single correspondence of service name, LCN and SID

ABC Regional S.A. feed covers all these areas

Block representing a transport stream

Prime have not commenced DTTB in Mandurah

Southern Cross not licenced in Mt. Gambier

Since the previous issue, there have been many changes so the usual practice of highlighting changes has not been included in this issue.
